

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A pack assembly comprising two packs of medicinal tablets joined together and cover pieces, the two packs being joined such that the assembly has a stowed configuration in which the medical tablets cannot be expelled and an opened configuration in which the medical tablets can be expelled, the cover pieces being in a face-to-face relation when the assembly is in its stowed configuration; each said of medicinal tablets, the pack comprising:

a base wall which defines a plurality of locations for the tablets, wherein at each such said location there is a displaceable pocket which is integral with the base wall and which constitutes a recess for a tablet,

a cover piece of a rupturable material, and

a tablet between the displaceable pocket and the cover piece,

wherein the base wall is of a sufficiently rigid construction as to be resistant to permanent deformation and is elastic such that it can be reversibly flexed;

wherein a junction between the pocket and the base wall acts as a hinge such that the pockets are bistable; and

wherein each pack is formed by injection moulding.

2. (Cancelled)
3. (Currently Amended) A pack assembly according to claim 2 wherein the pockets contain naked tablets.
4. (Currently Amended) A pack assembly according to claim 2 wherein the tablets are provided in a blister pack located in the pockets.
5. (Currently Amended) A pack assembly according to claim 1 wherein the base wall has openings which correspond to the locations for the tablets and the recesses are those of a blister pack located against the base wall, with its blisters protruding through the openings, and functioning as the displaceable pockets.
6. (Currently Amended) A pack assembly according to claim 1 comprising 4 to 16 pockets.
7. (Currently Amended) A pack assembly according to claim 1 wherein the base wall is formed from a polymer.
8. (Currently Amended) A pack assembly according to claim 1 wherein the pockets are substantially domed shaped.

9. (Cancelled)

10. (Currently Amended) A pack assembly according to claim 1 9 wherein the hinge is pre-stressed.

11. (Currently Amended) A pack assembly according to claim 1 9 wherein the pockets are stable both in a starting position in which they accommodate a tablet and in an inverted position in which they have expelled the tablet, through the cover piece.

12. (Currently Amended) A medicinal tablet pack comprising:

- a base wall resistant to permanent deformation;
- a plurality of pockets formed in the base wall;
- a tablet in each pocket; and
- a cover piece of a rupturable material over the pockets;

wherein the pocket is displaceable so as to expel a tablet from the pocket, through the cover piece.

13. (Previously Presented) A medicinal table pack comprising:

- a base portion resistant to permanent deformation, and
- a pocket comprising an open end, and an opposite closed end, the pocket retaining a medicinal tablet, the pocket being attached to the base portion at an intersection between the base portion and the

pocket wall;

characterized in that the pocket wall comprises a hinge at or in the vicinity of the intersection between the pocket and the base portion.

14. (Cancelled)

15. (Cancelled)

16. (Previously Presented) A method of manufacturing a pack according to claim 1 wherein the pack is formed by injection moulding with pockets formed in the base wall and hinges between the base wall and the pockets, wherein the hinges are pre-stressed during the manufacturing process.
